

Dylan Wiwad

Quantitative Researcher

Chicago, IL • +1-773-977-6169 • dwiwad@gmail.com • [linkedin.com/in/dwiwad](https://www.linkedin.com/in/dwiwad) • dylanwiwad.com

Quantitative researcher with 10+ years of experience applying behavioral science, survey science, psychometrics, causal inference, and advanced analytics to guide product strategy and executive decision-making. Skilled in experiment and survey design, predictive modeling, and large-scale behavioral data analysis using R, Python, and SQL, with a proven record of driving measurable impact at Slack and through peer-reviewed research.

EXPERIENCE

Senior Quantitative Researcher - Product UX

November 2024 – Present

Slack

- **Reshaping Slack's AI roadmap through behavioral and survey science.** Own all quant end-to-end research on AI user needs and adoption barriers. This research directly influenced the company prioritization of Slackbot, Channel Expert Agent, and AI Customer 360 as AI product offerings.
- **Lead quantitative researcher for Slackbot, Salesforce's #1 company priority.** As a direct result of my findings we: completely overhauled Slackbot's new user experience, spun up a brand new design workstream on user education, and prioritized "accelerating value discovery" as a top roadmap item for Slackbot.
- **Driving fast paced product decisions.** Design and run scrappy-but-rigorous studies that directly ship into product UX decisions (e.g., Slackbot naming, the Slackbot new user experience, Channel Expert branding).
- **Built LLM-as-judge UX quality evaluator that serves as a Slackbot guardrail.** I designed, validated, implemented, and maintain a UX quality evaluator that serves as a guardrail for Slackbot feature and model changes. This work resulted in changes to Slackbot's underlying LLM model and system prompt.

Senior Quantitative Researcher - Central Survey Science

July 2022 – November 2024

Slack

- **Own a company-scale product health measurement tool.** Lead recurring sentiment surveys with sampling frames over 100k. Survey results were a recurring input in Salesforce C-Suite exec reviews.
- **Changing product architecture.** I led whole system architecture research that drove structural UI changes improving our key OKR, positive-to-negative feedback ratio, from 1.6 to 5.4, exceeding our target by 35%.

Independent Data Scientist + Developer

June 2025 – Present

[Hockey Decoded](#) • [Github Repo](#)

- **Creating novel advanced hockey analytics metrics.** Under review manuscript creating a metric of roster depth can be found [here](#), blog [here](#), and discussion on the Wharton MoneyBall podcast [here](#) (Min. 52).
- **Building a production-grade NHL analytics platform on AWS.** Automated ETL + live game pipeline (S3, APScheduler) on ECS Fargate with CloudWatch monitoring; interactive Plotly dashboards covering rolling trends, rankings, and depth across all 32 teams, 82+ games each.

Postdoctoral Fellow

Sept. 2019 – July 2022

Northwestern University, Kellogg School of Management

Published 12 peer reviewed academic papers (4 first authored, h-index 9, >1,000 citations), with 3 under review. Primarily my research explored the psychology of inequality and discrimination. I also taught Negotiations Fundamentals (7x) to part-time and full-time MBA students.

EDUCATION

Simon Fraser University, Vancouver, BC

Doctor of Philosophy – Psychology

SKILLS & OTHER

Methods: Inferential statistics, latent variable modeling, causal inference, advanced survey sampling + weighting

Languages + Tools: R, Python, SQL, Qualtrics, Claude Code, VS Code, Jupyter,
